8.2 Exposure controls Personal protective equipment: General protective and hygienic measures:
The usual precautionary measures are to be adhered to when handling chemicals. Avoid contact with the eyes and skin.
Avoid direct contact with the chemical/ the product/ the preparation by organisational measures.
Protection of hands:
Rubber gloves The glove material has to be impermeable and resistant to the product/ the substance/ a preparation.
Selection of the glove material on consideration of the penetration times, rates of diffusion and degradation
Material of gloves
The selection of the suitable gloves does not only depend on the material, but also on further ma of quality and varies from manufacturer to manufacturer. As the product is a preparation of sever substances, the resistance of the glove material can not be calculated in advance and h therefore to be checked prior to the application.
Penetration time of glove material
The exact break trough time has to be found out by the manufacturer of the protective gloves a has to be observed.
Eye protection: Goggles recommended during refilling
